**2. Citations and explanations (Rule 70.7)**

The closest prior art cited in the International Search Report is considered to be WO 9713639 (document D1). In this document, a liquid barrier composition, including a dispersion or solution of a polymer, is applied as a barrier layer (14) on a core layer (11) of paper or paperboard. Before the barrier layer is applied, a layer of plastic is extruded on the core layer. In this way the risk of undesired curling, which can result if the barrier layer is applied directly to the core layer, and the consequential risk of crack formation of the barrier layer is eliminated.

In the claimed invention a liquid barrier is applied on a carrier layer and dried in a first step. Thereafter the dried barrier layer is combined with the core layer in a second step. Then the dried barrier layer is cured by heating to a temperature, which is higher than the drying temperature. Thus, the claimed invention differs from the cited document and the claimed invention is novel.

The claimed invention solves the problem with crack formation but in a different way than in D1. An additional advantage of the claimed invention is that the same production equipment, as in the production of packaging material using aluminium foil as the barrier layer, can be used. With the knowledge of D1 the claimed invention is not considered obvious to a person skilled in the art.

**Supplemental Box**

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: V

The International Search Report also cites WO 9809812 (document D2) and US 3876452 (document D3). D2 discloses a packaging laminate with a gas barrier layer applied as dispersion coating. It is stated in the document that the laminate may include a core layer of, for example, paper or paperboard. D3 discloses a material coated with an aqueous dispersion of a polymer. An assembly of the coated material with a paper can be prepared. However, it is not evident from D2 and D3 to solve the problem with cracking. Moreover, the documents do not disclose that the barrier layer is cured after lamination with the core layer.

According to the arguments stated above, the claimed invention is novel, considered to involve an inventive step and have industrial applicability.
